

Work Completion Report

Booking System · Accounts System · AHS · Aahaas Task Manager

Prepared for	Pradeep Kumar — pradeep.kumar@bcdtravel.lk
Prepared by	Sasindu Diluranga — sasindu@aahaas.com
Report date	12 September 2026
Period covered	12 August 2026 – 10 September 2026
Source of record	Daily work logs, <i>Booking_System/DailyUpdated</i> (24 files)

18 WORKING DAYS RECORDED	214 ITEMS COMPLETED	54 ITEMS OUTSTANDING	80% COMPLETION RATE
--------------------------------	------------------------	-------------------------	------------------------

Please note — email requests are not covered.
This report records **what was delivered**, taken from the dated work logs. It does **not** state which changes were requested by email, because Gmail read access is not granted to the connected account (the connector returned “*Insufficient scope*” for *gmail.readonly*). Nothing about any emailed request has been guessed or reconstructed. Once Gmail read permission is authorised, this report can be reissued with each delivered item mapped against the request it answers.

1. Changes requested by boss — completed or not

Requested by Pradeep Kumar (pradeep.kumar@bcdtravel.lk) · actioned by Sasindu Diluranga (sasindu@aahaas.com)

This register is blank on purpose. The requests live in email, and Gmail read access is not granted to the connected account, so not one request could be read. Nothing has been guessed or filled in. Authorise Gmail read permission and this page fills automatically from the mailbox.

2. Day-by-day summary

Date	Day	Done	Not done	Total	Completion
2026-08-12	Wednesday	8	0	8	100%
2026-08-13	Thursday	11	0	11	100%
2026-08-14	Friday	12	0	12	100%
2026-08-17	Monday	10	0	10	100%
2026-08-18	Tuesday	10	0	10	100%
2026-08-19	Wednesday	11	0	11	100%
2026-08-20	Thursday	8	0	8	100%
2026-08-21	Friday	9	0	9	100%
2026-08-25	Tuesday	6	0	6	100%
2026-09-01	Tuesday	12	0	12	100%
2026-09-02	Wednesday	14	0	14	100%
2026-09-03	Thursday	20	0	20	100%
2026-09-04	Friday	17	4	21	81%
2026-09-05	Saturday	10	8	18	56%
2026-09-07	Monday	12	9	21	57%
2026-09-08	Tuesday	13	12	25	52%
2026-09-09	Wednesday	17	8	25	68%
2026-09-10	Thursday	14	13	27	52%
TOTAL		214	54	268	80%

Reading the 100% days: the logs written before 4 September 2026 carry no 'Follow-Up Items' or 'Outstanding' section at all, so those days show nothing outstanding simply because nothing unfinished was written down — not because more was completed. From 4 September the logs record open items explicitly, which is why the completion rate drops. The figures are comparable within each of those two stretches, not across them.

3. Detailed work register

Done = the item has a written delivery entry in that day's log. **Not done** = the item was recorded that day under Follow-Up Items, Open Items or Outstanding.

2026-08-12 — Wednesday · 8 done, 0 outstanding

System / Project	Item	Status
Accounts System (Integration Work)	Hotel Master List Integration Built a read-only reader for the Accounts system's hotel master list (invoice_processor.hotel_details — the Suppliers Manage → Hotel tab), covering ~841 Sri Lanka hotels with their bank and payment-day details. Pre-checking now ma...	DONE
Accounts System (Integration Work)	Detailed P&L — Costing Sheet Enhanced the Detailed P&L panel to render the Accounts costing sheet inline on the booking page (previously it required a separate page load). Refactored the P&L page — moved ~1,170 lines out of the page component into the shared ...	DONE
Accounts System (Integration Work)	Ticket Generation from the Costing Sheet Tickets are now generated from the itemised costing sheet instead of the flat pnl_items invoice lines. Old behaviour: a whole Sri Lanka tour produced 2 tickets both reading "Transport". New behaviour: one ticket per purchasable it...	DONE
Accounts System (Integration Work)	Manual P&L Upload (new fallback) Some bookings have no matching costing sheet in the Accounts system (IS number match fails) — until now the P&L page simply ended there with nothing to cost. Built a Manual P&L Upload panel so Accounts or the Booking team can: Upl...	DONE
Booking System	Hotel Pre-checking Module (new) A complete new module that lets operations verify every hotel stay in a booking before confirmation. Built the Pre-checking engine (hotel-precheck.ts, hotel-precheck-write.ts) — reads every accommodation stay on a booking and work...	DONE
Booking System	Driver Pre-checking Module (new) The same pre-checking concept, applied to transport. Built the driver pre-check engine (driver-precheck.ts, driver-precheck-shared.ts). Added the driver APIs: GET /api/precheck/driver/[ref] — driver pre-check status POST /api/prec...	DONE
Booking System	Accommodation Refetch Fix Fixed the accommodation refetch logic (as-refetch-accommodations) so that hotel names on "own arrangement" stays are preserved. Previously a refetch from AppleSystem would blank out or overwrite manually entered hotel names for gu...	DONE
Booking System	UI / UX Improvements Implemented sidebar pinning and hover-expand: the sidebar can now be pinned open, or kept collapsed and expanded on hover, with the preference persisted per user. Added the new Pre-checking entries to the sidebar and booking secti...	DONE

System / Project	Item	Status
Accounts System	Excel Rate Sheet — Manual Editing (new) The Vietnam agent rate sheet drives how VN P&L products are re-priced. Until now the only way to correct a rate was to re-upload the whole workbook. Built a new Excel Rate Sheet editor (/settings/excel-rate-sheet) — a full browse/...	DONE
Accounts System	Missing Products — Detection, Management & Reporting (new module) Some P&L products simply do not exist in the agent's rate sheet, so they cannot be priced. Previously these silently landed at zero cost. Built MissingProductService — scans Detailed P&L lines against the rate sheet and records ev...	DONE
Accounts System	Payable 1.0 — Transfer Leg → Driver Allocation (new matcher) Malaysia and Singapore transfers must be paid to the specific driver Ops assigned to that movement, not to a generic supplier. Built TransferLegMatcher — matches each transport payable line to the exact itinerary leg it belongs to...	DONE
Accounts System	Payable 1.0 — Ticket Portals (new, cross-system) Attraction tickets for MY / SG / VN are bought through online portals. Ops records which portal the ticket was bought from; Accounts has to pay that portal. Created the shared payment_portals table (create_payment_portals_table) p...	DONE
Booking System (Ops)	Ticket Portals — Ops Side (pairs with 1.4) Built the portal management API (/api/portals, /api/portals/[id]) and the Admin → Portals page, writing to the same shared payment_portals table Accounts reads. Extended the ticket purchase flow (/api/tickets/[id]/purchase) so tha...	DONE
Booking System (Ops)	Hotel Only Bookings (new) Some bookings are accommodation-only — no transport, no driver, no movements. These were previously flowing through the full operational pipeline and showing up as incomplete forever. Added the Hotel Only flag on a booking (prisma...	DONE
Booking System (Ops)	Hotel Reconfirmation — Facets, Filters and Delay Handling Continuing yesterday's pre-checking work, today focused on making reconfirmation manageable at scale. Implemented reconfirmation facets and filters on the Ops drilldown and Operations board (reconfirm-filters.ts, ops-day-data.ts) ...	DONE
Booking System (Ops)	Last-Minute Booking Alerts (new) Implemented last-minute booking classification (lib/last-minute.ts, last-minute-shared.ts) — bookings arriving inside the threshold window are detected and ranked by urgency. Added the API /api/bookings/last-minute, the acknowledg...	DONE
Booking System (Ops)	Query Monitor — Daily Mail Statistics (new) Implemented daily mail statistics tracking across the query-monitor module (daily-stats.ts, daily-stats-sheet.ts, /api/query-monitor/daily-stats). Added the Daily Mail tab and a Config tab to the Query Monitor admin page — per-mai...	DONE
Booking System (Ops)	MC Report Enhancements Added guide and tour vendor details to the MC report and its printout. Built the Assign Movement modal — assign a driver / guide / vendor to a movement directly from the report instead of going into each booking. Added the agent n...	DONE
Booking System (Ops)	Access & Permissions Updated the Vietnam ground team role: refined permissions in rbac.ts and middleware.ts, and granted the appropriate level of P&L access with clearer role descriptions on the Admin → Users page....	DONE

System / Project	Item	Status
Accounts System	Ticket Approval Process for Ground Team Requests (new module) The ground teams request attraction tickets; until now Accounts had no formal step between "requested" and "paid". Built the ticket_approvals schema (migration create_ticket_approvals_table) with the TicketApproval model — request...	DONE
Accounts System	SL Booking Count Check — Reconciliation Page (new module) Sri Lanka arrivals in Ops and driver advances in Payable 1.0 were drifting apart, and the gap was only ever found by hand. Built SIBookingCountCheckService — compares the Ops arrival list for a day against the Payable 1.0 driver-a...	DONE
Accounts System	SL Count Check — Automatic Sweep & Email Report (new) Built SICountCheckSweepService — sweeps the D+0 ... D+8 window on a schedule, checking and repairing each day automatically. Added the command SweepSIBookingCount and its schedule entries in routes/console.php. Added SICountCheckRep...	DONE
Accounts System	Hotel-Only Bookings — Payable Side (pairs with yesterday's Ops flag) Substantially reworked SIHotelOnlyBookingService so accommodation-only bookings produce correct payable lines without expecting transport that will never exist. Updated PayableV1Controller and the Payable 1.0 board to present thes...	DONE
Accounts System	Payable 1.0 — Driver Advance for Uncosted Bookings Extended PayableV1Controller and PayableReportService so a booking that has not yet been costed can still carry a driver advance — previously the advance was blocked until costing existed, which held up drivers on late bookings. S...	DONE
Accounts System	SL Hotel Supplier Auditing (new tooling) Added the command AuditSIHotelSuppliers — audits Sri Lanka hotel payable lines against the supplier master and reports unmatched or ambiguous suppliers. Added DiffSIHotelPayables — diffs hotel payables between runs so a change in ...	DONE
Accounts System	AS PNL Import into the PNL Database Added AsPnlImportService plus the import action on the AS PNLs page — a live AS PNL can now be imported straight into the local pnl_records database instead of waiting for the nightly sync. Improved IS number matching in AsPnlImpo...	DONE
Accounts System	Last-Minute Alerts — Channels & Per-User Preferences Added channel tracking to last-minute alerts (migration add_channel_to_last_minute_alerts) with the LastMinuteAlert model, so each alert records how it reached the user. Added the alert_preferences table and AlertPreference model ...	DONE
Booking System (Ops)	Ticket Approval Workflow for Malaysia, Singapore and Vietnam (pairs with 1.1) Added the approval schema (prisma/schema.prisma, manual-sql/2026-08-14-ticket-approvals.sql) and the API /api/tickets/[id]/approval, plus approval-aware updates to /api/tickets, /api/tickets/[id] and /api/tickets/[id]/purchase. Up...	DONE
Booking System (Ops)	Accounts Integration Endpoint — SL Booking Repair (new, cross-system) Built /api/integrations/sl-booking-repair — the endpoint the Accounts count check calls to retrieve a booking from AppleSystem / OneDrive when it is missing on the Ops side. Added the supporting environment configuration in .env.e...	DONE
Booking System (Ops)	Last-Minute Booking Board & Panel (D-4) Built the last-minute board API (/api/bookings/last-minute/board) and the last-minute panel component — the permanent board beside the header bell, showing every booking arriving inside the D-4 window. Extended lib/last-minute.ts ...	DONE
Booking System (Ops)	WhatsApp — Related Threads Added related-thread support to the WhatsApp inbox and the booking mini-chat: conversations and messages APIs now resolve threads related to the same booking/contact, so a conversation split across numbers reads as one history....	DONE

System / Project	Item	Status
Accounts System	Internal Chat — full module (new, largest item of the day) Teams were coordinating booking questions over WhatsApp and email, with nothing tied to the booking itself. Chat is now built into the system. Schema — migration create_chat_tables (conversations, participants, messages, attachmen...	DONE
Accounts System	Detailed P&L — Hand Editing of Costing Lines (new, super-admin) Built PnlPayloadEditService and the pnl_payload_edits table / PnlPayloadEdit model — a super admin can now hand-correct individual costing lines on a Detailed P&L when the source data from the Apple System is wrong. Every edit is ...	DONE
Accounts System	Detailed P&L — Basis Switch Added a basis switch to the Detailed P&L view (DbPnlController + modal) so the same booking can be read on either basis without leaving the view — previously it meant opening a different page to compare....	DONE
Accounts System	P&L Card Titling Improved the P&L card title logic so each row is labelled by what it actually is, rather than falling back to a generic product name....	DONE
Accounts System	Vietnam Excel Re-check — Implausible Rates Reworked implausible-rate handling in VietnamExcelPriceService and tightened row selection against the rate sheet, so a suspect rate is refused rather than written into a P&L, and the correct sheet row is picked when several are c...	DONE
Booking System (Ops)	Internal Chat — Ops side (pairs with 1.1) Added the chat schema to prisma/schema.prisma and built the full /api/chat/* surface: bootstrap, conversations (direct/group/members/read/mute/pin), messages, reactions, uploads, media, people, presence, typing, pulse, dock, live ...	DONE
Booking System (Ops)	Chat Real-time Push Hub (new service, cross-system) Built chat-realtime/ — a standalone Node SSE hub (server.js) that both systems connect to for live message, presence and typing push, with a selftest.js and a README covering setup. Added the configuration and README section on th...	DONE
Booking System (Ops)	MC Report — Cancellation Request Tracking Added cancellation request tracking to the MC report (/api/mc-report, the MC report page and the print view) so a booking with a pending cancellation is visible on the report instead of appearing as a normal confirmed booking. Sub...	DONE
Booking System (Ops)	Query Monitor — Thread Rounds Added the newRound column to query_monitor_entries (schema + manual-sql/2026-08-17-query-monitor-thread-rounds.sql) to track rounds within a query thread. Fixed row handling in the monitor so a hand-typed File Handler is preserved...	DONE
Booking System (Ops)	Smaller Fixes Avatar image handling fixed across the dashboard. Booking agenda generation improved (agenda/generate, agenda/word, agenda mailer, PDF/HTML generators). Tidy-ups in incoming-mail-automation, own-arrangement, emergency-contacts, rb...	DONE

System / Project	Item	Status
Accounts System	Shared Profile Photos (cross-system, pairs with 3.1) Profile pictures were not resolving across the two systems, so chat showed blank faces. ChatAvatarService + AvatarController and a dedicated /avatar route — each system serves faces from its own route, reading from one shared avat...	DONE
Accounts System	Chat — Emoji & Stickers (pairs with 1.6) Built the emoji/sticker tray in public/js/chat.js and public/css/chat.css with customisable trays and recent-usage tracking, then fixed the tray closing behaviour and versioned the chat assets so the browser picks up the new build...	DONE
Accounts System	Payable 1.0 — MY/SG Excel Export Columns Reworked the CSV/Excel export on /payables/v1 with dynamic column handling: for Malaysia and Singapore only, the export now leads with Booking Arrival, CNTL Number, IS Number, Currency, Invoice Amount, Received Amount, Balance, Li...	DONE
Booking System (Ops)	Daily Update Sheet — new component (largest item of the day) The team had no single place to see what is arriving, who the guest and agent are, and how to reach them. Built /dashboard/daily-update: Sheet (daily-update-sheet.tsx, lib/daily-update.ts, /api/daily-update) — travel dates, bookin...	DONE
Booking System (Ops)	Daily Update — AI Call Tracking Added /api/daily-update/calls, lib/daily-update-calls.ts and lib/daily-update-calls-data.ts — every booking row now shows its on-ground AI call state and summary, carried into the HTML and XLSX exports. Split the fetching logic fr...	DONE
Booking System (Ops)	Daily Update — Digital Feedback Forms Integrated the digital feedback form responses into the sheet (lib/daily-update-feedback.ts), surfaced on the booking page as well, and included in both exports — so the call result and the guest's own feedback are read side by si...	DONE
Booking System (Ops)	Experience Report Centre — new module Post-trip reporting for the Experience Team (/dashboard/te/experience-reports, 22 new files): Schema + SQL (2026-08-18-te-experience-reports.sql and its apply script) and the full /api/te/experience-reports surface — list, detail,...	DONE
Booking System (Ops)	Service Types Expanded New lib/service-types.ts plus 2026-08-18-agenda-service-types.sql and a schema change — the expanded service types now flow through the agenda (generate, Word, PDF), ground assignments, the MC report and its print view, the TE dai...	DONE
Booking System (Ops)	Chat — Emoji & Stickers Added an emoji and sticker tray to the chat composer (chat/emoji.ts, composer.tsx, message-bubble.tsx), including recent-usage tracking...	DONE
Booking System (Ops)	Chat / WhatsApp / Ops AI — Launcher Alignment Fixed the misaligned floating launchers: the chat dock, the WhatsApp mini chat and the Ops AI button now sit in one consistent launcher lane without disturbing the components themselves....	DONE

System / Project	Item	Status
Agenda & Delivery Improvements	Free-text entry in the agenda dropdowns New combo-input.tsx component plus an agenda suggestions API (/api/agenda/suggestions, lib/agenda-suggestions.ts) — the dropdowns are now suggestion lists: if the value the operator needs is not in the list they can type it in dir...	DONE
Agenda & Delivery Improvements	Word (DOCX) delivery over WhatsApp Agenda — lib/generate-agenda-docx.ts produces the movement chart as a Word document with the booking summary; the send dialog now lets the user choose PDF or Word and delivers the chosen format over WhatsApp. Booking confirmation ...	DONE
Agenda & Delivery Improvements	Daily Update Sheet — call approval filter The Call Approval column is now filterable: approved, not sent, sent – not approved, and no contact number to send (lib/daily-update-approval.ts), so the team can work the exceptions rather than scanning the whole sheet....	DONE
Journey Map — new component (largest item of the day)	The map itself lib/journey-map.ts + components/bookings/journey-map.tsx — every place on the file becomes a pin: arrivals, departures, transfers, tours, attractions, beaches, cultural sites, cruises, hotels. Two sources, one component. source="i...	DONE
Journey Map — new component (largest item of the day)	Real roads, not straight lines (lib/road-route.ts) Each leg is routed through OSRM and drawn as the road the coach actually drives, labelled with driving distance (km) and driving time. A straight arc crosses reservoirs and makes a four-hour mountain transfer look like a hop. A ro...	DONE
Journey Map — new component (largest item of the day)	Flights woven into the route The movement chart books the car to the airport but never the sector itself, so a Vietnam file would teleport from Ho Chi Minh to Da Nang. The map now reads the flight list and weaves every sector in as inbound / internal / outbou...	DONE
Journey Map — new component (largest item of the day)	Animation and controls Vehicle icons ride the line by service type — 🚗 private, 🚌 SIC, ✈️ flight, 🧑 own arrangement, 🎫 ticket only, 🏨 hotel only, 🍽️ meal — oriented along the direction of travel. When nothing is playing an idle rider drives the finished...	DONE
Journey Map — new component (largest item of the day)	Guest portal + layout fixes (from review feedback) The same map is now on the client portal and trip page, gated by the signed portal-link token instead of a session, written in guest voice, and built for mobile — including an Explore / Done control so a vertical swipe scrolls the...	DONE
Journey Map — new component (largest item of the day)	Cost and failure behaviour Route, geocode, road-leg and brief results are all cached; the route cache is keyed on the booking version, so an amendment rebuilds it automatically. Nothing is written to the database — no table, no column, no migration. Every m...	DONE
Live Confirmation Watch — new component	Live Confirmation Watch — new component The problem, confirmed with the team today: the 06:00 import brings in yesterday's confirmations, so a quotation confirmed at 09:00 in the Apple System only appeared in Ops the next morning. lib/as-watch.ts + lib/as-watch-schedule...	DONE
Live Ops Dashboard Hero — new component	Live Ops Dashboard Hero — new component The dashboard could say how big the book is; it could not say who is out there right now. /api/dashboard/live-ops — a strictly read-only single read across bookings, agenda items, ground assignments and flights, so the picture is ...	DONE

System / Project	Item	Status
Accounts System	Payable 1.0 — Excel export dialog The Export button now opens a column and format picker instead of downloading at once: .xlsx (default) or .csv, a per-column checkbox list with ordering, and a toggle for portal totals. MY and SG on the Attraction section default ...	DONE
Accounts System	Non-credit invoices — SG40059 not appearing Search widened to match on invoice number and reference number, not just the previous fields — which is why SG40059 could not be found. Only the latest revision is listed. An amendment arrives as a new confirmation email under the...	DONE
Accounts System	Vietnam ground team access The VN Limited role can now reach the Drivers and Vehicle Vendors registries (nav + middleware), which it needed for allocation work. No admin tools were opened up...	DONE
Actual figures → Payable 1.0 (cross-system)	Actual figures → Payable 1.0 (cross-system) The derived figure is right most of the time, but not always — an extra airport run, a re-agreed package. The people who know were retyping numbers into Payable 1.0 out of WhatsApp. Two editable columns on the Drive Log: Actual Tr...	DONE
Journey Map follow-ups (from yesterday's review)	Journey Map follow-ups (from yesterday's review) Playback is now configurable and saved in Settings — speed (default slowed to 0.55x, because the old pace crossed a leg in 1.5s and nobody could read a stop before the camera left), follow zoom, cinematic camera that rides with th...	DONE
Query Monitor — All Mails ledger	Query Monitor — All Mails ledger New All Mails tab and API: one message, one row — the chaser, the voucher, the out-of-office, the colleague's forward, in arrival order. Every other Query Monitor view filters something out; this one is the complete record, export...	DONE
Settlement Documents — the paper pack, printed	Settlement Documents — the paper pack, printed The SL desk fills four sheets in by hand for every settlement. There is now a Documents button on each Drive Log row that opens an editor for all four and prints them as one PDF: Name board (landscape, guest name large), transport...	DONE
Sri Lanka Drive Log — new component (largest item of the day)	Sri Lanka Drive Log — new component (largest item of the day) /dashboard/srilanka/drive-log in the Booking System. One row per Sri Lankan booking: IS number (main) with CNTL number beneath it, arrival date, and the assigned driver — clicking the driver opens the full driver and vehicle detai...	DONE

System / Project	Item	Status
"No Tickets" bookings	"No Tickets" bookings Some bookings sell no tickets at all, and QC was waiting forever for a ticket activation that was never coming. New noTickets mark on the booking, set and cleared from the tickets page (/no-tickets routes, authorised). QC now read...	DONE
Accounts System — Daily Updates page	Accounts System — Daily Updates page New /daily-updates page: the P&L payment board the finance desk asked for, built off the P&L lines already in the database, with the last AS-PNL fetch time shown and an on-demand fetch if the figures look stale. One row per bookin...	DONE
Apple System full booking sync + pre-arrival scheduler	Apple System full booking sync + pre-arrival scheduler as-booking-sync.ts — a full re-read of one booking from the Apple System that refreshes its content in place: Non-destructive. Fields are compared before writing and locally entered values are preserved; a sync never overwrites wh...	DONE
Settlement Documents — finished into a real pack	PDF that works on this server The print path was falling over: Chromium at /tmp/chromium cannot run on this host — binary targets x86-64 but this host is arm64. Rather than fight the bundled Chromium, the renderer now has a PDFKit fallback (sl-settlement-docs-...	DONE
Settlement Documents — finished into a real pack	Orientation per sheet Name board is landscape A4, the other sheets portrait A4 by default, and the choice is changeable and saved per document. Mixed orientation inside one PDF holds in both renderers....	DONE
Settlement Documents — finished into a real pack	Logo gallery The pack's main logo defaults to AppleHolidaysLogo.png but is no longer hard-coded: New logos endpoint — lists the built-in logos plus everything previously uploaded, and accepts new uploads (file type and size validated, authoris...	DONE
Settlement Documents — finished into a real pack	Tour Settlement rate card The Tour Settlement sheet was being filled in from memory. It now prices itself: New shared table sl_tour_rates holding adult and child rates per attraction, with GET/PUT endpoints so the desk maintains the card in one place. Tour...	DONE
Settlement Documents — finished into a real pack	Guest feedback QR + feedback form Signed, login-free guest links (feedback-link.ts) — token generated and verified server side, derived from a public base URL with a fallback, so no session is needed. QR code (sl-settlement-qr.ts, cached as data URI and PNG) print...	DONE
Settlement Documents — finished into a real pack	Send documents to the driver over WhatsApp Send Driver Documents button on both places on the Drive Log, backed by sl-settlement-docs-notify.ts and a new sl-phone.ts number normaliser (SL local formats → international). Delivery goes through a Meta message template. The fi...	DONE

System / Project	Item	Status
Accounts System	Invoice Studio — editable invoice documents + currency conversion (new module) The largest piece of the day. An invoice's printed content used to live in three separate places — the invoice row (number, dates, parties, totals), the source email (guest, pax, tour dates, file handler) and the calculations blob...	DONE
Accounts System	Proforma Invoices — FX on settlement, receipts and bank details Accounts pays out of a rupee account while properties bill in their own currency. The one number the desk argues about afterwards — what did this cost us in rupees, and at what rate? — was nowhere on the record. It could be re-der...	DONE
Accounts System	Payable 1.0 — agent Credit / Non-Credit fixed (live-data defect) Payable 1.0 and the payable reports were reading the agent's credit type off <code>pnI_records.credit_type</code> — a column that does not exist. Every row therefore fell through to a hardcoded 'Credit', so an agent explicitly marked Non-Credi...	DONE
Accounts System	AS P&L — revisions were never being picked up (live-data defect) A booking sat on revision 3 (sell 210) here while upstream had moved to revision 5 (sell 190). Two independent causes, both fixed: "Fetch from AS API" could not see a revision. When the Apple System revises a booking it does not e...	DONE
Booking System (Ops)	Proforma Invoice — read the document instead of typing it (new) A reservation clerk used to hold the PDF in one hand and type nine numbers into a form with the other. Every keystroke is a chance to transpose a figure Accounts will later pay — and the bank details at the foot of the page were n...	DONE
Booking System (Ops)	Proforma — bank details schema and settlement visibility Added <code>scripts/sql/proforma-component-02-bank-details.sql</code> — the beneficiary account columns on <code>proforma_invoices</code> (account name, bank, branch, account number, SWIFT, IBAN, currency, address) plus the <code>aiExtract</code> / <code>aiExtractedAt</code> column...	DONE

System / Project	Item	Status
Accounts System (Laravel)	Payable 1.0 — hotel stays now pay on the hotel's own due date (7ed7844, 10:44) The Sri Lanka hotel section is placed by the hotel's own payment day rather than the booking's arrival, but a hotel-stay row built from a budget allocation was falling through that rule and landing on the booking's date instead — ...	DONE
Accounts System (Laravel)	Duplicate P&L records now tell you where the other copy lives (6a5d29b, 12:13) "This record already exists" is only useful if it says which record and where. Previously the desk had to go hunting. New app/Support/PnlRecordLocator.php (+109) — given a booking, returns the page and the anchor where the existin...	DONE
Accounts System (Laravel)	Supplier P&L → board: read the supplier's document, file it as a P&L (9429e2d, 13:41) — largest item of the day Some bookings are costed by a supplier who sends a Word P&L rather than anything the Apple System ever saw. Those had no route onto the board at all. SupplierPnlParser.php (+853) — reads the supplier's .docx costing sheet: section...	DONE
Accounts System (Laravel)	Board-specific FX on exports (68f5b91, 14:52) A Payable 1.0 export was printing raw amounts while the board on screen showed converted ones, so the workbook and the page disagreed. payables/v1/index.blade.php — the export now carries the board's own FX rate and the converted ...	DONE
Accounts System (Laravel)	Rates to two decimals, everywhere they are printed (46d096d, 15:01) Six-decimal rates are correct for CBSL's publication and wrong for a document a person signs — a driver advance receipt printed 301.482900, which reconciles against nothing anybody wrote down. SiPayableSettings::standardRate() / s...	DONE
Accounts System (Laravel)	Manual FX lock on an invoice — super admin only (402591b, 15:43) An invoice's rupee value was being restated at today's rate every time somebody opened it. For an invoice already settled, that is a number that changes after the money has moved. Migration add_manual_fx_lock_to_generated_invoices...	DONE
Accounts System (Laravel)	/daily-updates — Invoices & profit panel (0243389, 16:12) A read-only panel between the KPI strip and the filters, driven by the FROM/TO period already on the page. No migration, no write path. Four cards: Below them, a per-currency table printing the arithmetic: created count & value, r...	DONE
Accounts System (Laravel)	Both auto-report emails now split amendments by the age of the booking behind them (2ce2f69, 16:17) A day's amendment count says nothing useful on its own — re-issuing today's booking and re-opening a booking from six weeks ago are different events with different consequences. New section in each email, "Amendments — where they ...	DONE
Accounts System (Laravel)	Apple System timeline strip on the Detailed P&L (23d92e5, 17:27) A strip directly under the Tour No / IS Number / Agent fact box: Created · Last updated · Synced here. AsPnlSyncService — the stored as_payload now keeps a booking node carrying the Apple System's own created_at, updated_at, updat...	DONE
Accounts System (Laravel)	IS number in the search box is a lookup, not a filtered search (3a7b01e, 17:59) Typing an IS number and getting nothing back — because the date window or country filter silently excluded it — is the board lying to the person using it. DbPnlController::resolveFilters() — if the search term normalises to an IS ...	DONE
Accounts System (Laravel)	Cancelled bookings can now be shown in P&L listings and reports (c8f4eb7, 18:12) The natural follow-on from the item above: cancelled records were excluded by a rule separate from the filters, so an IS lookup could still come back empty with no explanation. DbPnlController (+45) — an explicit include cancelled...	DONE

AHS (Aahaas front end) — standard-mode redesign	Glossy light hero across six pages (b0a779a7, 14:59) CategoryHero (.jsx +252, .css +491, both new) — a shared hero: bright photo → soft white veil → dark navy headline with a red-orange gradient accent word. heroSlides.js (+185, new) — every slide swapped to bright, airy photography...	DONE
AHS (Aahaas front end) — standard-mode redesign	Category dock and hero transition (258e1b06, 15:41) Category dock — about 55% shorter and restyled. From a stacked 6-column grid (icon over label, ~106px tall) to a compact chip row (~46px tall): Chips are icon + label side by side, auto-width, centred — the dock takes only the spa...	DONE
Accounts System — Detailed P&L corrections now reach Payable 1.0 (fff5d19, 12:45)	Accounts System — Detailed P&L corrections now reach Payable 1.0 (fff5d19, 12:45) A correction to the premise first: two kinds of edit exist on that sheet, and only one was broken. "Edit figures" — typing over an Apple System cell — goes through PnlPayloadEditService, which writes into as_payload, and every pay...	DONE
Cross-system alignment delivered today	Cross-system alignment delivered today	DONE
The reporting thread — one day, one definition, three mails	The diagnosis (morning) The two Accounts mails counted a day on two different clocks: The invoice report counts documents we raised that day — generated_invoices.created_at, Asia/Colombo. The P&L report counts bookings the Apple System raised that day — ...	DONE
The reporting thread — one day, one definition, three mails	Accounts — P&L / invoice parity (f958f69, 10:41) Read-only in effect: no writes, no migrations, no data touched. Reports/PnlInvoiceParity.php (+162, new) — for the report's window, resolves every invoice the invoice report counts to its newest P&L (through the existing BookingKe...	DONE
The reporting thread — one day, one definition, three mails	Accounts — single-business test runs in the scheduler (c9355ff, 10:43) So a fix like the one above can be proved on one book of business before it reaches everybody's inbox. AutoReportService dispatch logic extended to run a single business as a test. AutoReportController and AutoPnlReportController ...	DONE
The reporting thread — one day, one definition, three mails	Accounts — Aahaas B2B (Flights) gets its own daily report (07312b7, 11:21) Why a new report type and not a third brand in the existing split: that split cuts one day of generated_invoices into AHDS (B2B) and Aahaas (B2C). Flights bookings never enter generated_invoices — they live only on the read-only b...	DONE
The reporting thread — one day, one definition, three mails	Accounts — repair command for manual line totals (f60d4c9, 11:51) Console/Commands/RepairManualLineTotals.php (+105, new) — repairs stored totals on P&L records carrying hand-built lines, where the total and its lines had drifted apart. PnlManualLineService (+122 / -47) — the totalling logic rew...	DONE
The reporting thread — one day, one definition, three mails	Accounts — count check wording moved into config (4330334, 12:13) config/reports.php (+17) — the count-check rows and their sentence become configuration. Applied across accounts-daily-summary.blade.php, auto-report.blade.php and pnl-auto-report.blade.php, so three mails can no longer phrase the...	DONE
The reporting thread — one day, one definition, three mails	Ops — the OPS Daily Operations Report leads with the same count check (8bcc9a0, 14:08 · PR #315) What was wrong. The two mails answered different questions and neither said so. OPS led with "42 new bookings" (bookings created in OPS, by OPS's own clock); Accounts led with "41 bookings · 41 P&Ls · 41 invoices" (confirmations r...	DONE
The reporting thread — one day, one definition, three mails	Accounts — the day cohort, and pre-send validation (fce3e7b, 17:01 · PR #54) This is the piece the whole thread was building towards, and it comes straight from the requirement: the OPS report must show only Apple System-created booking counts — if the Apple System raised 41 confirmations on 1 September, t...	DONE

System / Project	Item	Status
The reporting thread — one day, one definition, three mails	Ops — the same cohort logic on the OPS side (e908f6c, 17:01 · PR #316) Merged in the same cross-repo cycle, so both systems changed together. lib/reports/apple-cohort.ts (+149, new) — the Apple System confirmation cohort, on the OPS side. lib/reports/report-data.ts (+138) and report-html.ts (+88) — t...	DONE
The reporting thread — one day, one definition, three mails	Accounts — uncounted P&L activity removed from the mails (8e2d89e, 17:30 · PR #55) The last change of the day, and a deletion rather than an addition. Once the cohort defines the day, a block listing P&L activity that falls outside the counted set is no longer informative — it is a second set of numbers next to ...	DONE

4. Outstanding items — consolidated

54 items were recorded as unfinished across the period. Some were closed on a later day; each is shown against the date it was raised.

Date	System / Project	Outstanding item
2026-09-04	(carried forward)	Run the relevant application checks/builds where required for deployment validation.
2026-09-04	(carried forward)	Review the new Payable 1.0 verification and direct-ticket issuing flows in the UI.
2026-09-04	(carried forward)	Confirm the production schedule and recipient behavior for automated Task Manager daily updates.
2026-09-04	(carried forward)	Confirm whether any AHS homepage/category-dock work should continue next.
2026-09-05	(carried forward)	Run the Payable 1.1 migration and grant payable_v11 page access to the users who need it.
2026-09-05	(carried forward)	Add OpenAI credits, then re-run the health check to confirm the JSON-mode and sample-split steps.
2026-09-05	(carried forward)	Re-check any previously overlaid Malaysian P&Ls (starting with MY 40097) against the corrected chain-key logic.
2026-09-05	(carried forward)	Confirm which AHS branch the homepage and category work should land on next.
2026-09-05	(carried forward)	Confirm whether Booking System / OPS work resumes on the ticket-control items from 04 September.
2026-09-05	Accounts System — Laravel	The Payable 1.1 migration still has to be run on the target environment.
2026-09-05	Accounts System — Laravel	The payable_v11 page grant must be issued for non-super-admin users.
2026-09-05	Accounts System — Laravel	OpenAI credits are needed before the AI split and the last two health-check steps can complete.
2026-09-07	(carried forward)	Run the query-monitor mirror SQL on the live database, then commit and deploy — in that order — and confirm the next sweep fills the new tab.
2026-09-07	(carried forward)	Decide on removing the four archive tabs from the query workbook, and whether to index cancelledAt.
2026-09-07	(carried forward)	Rotate the OpenAI keys (the working one has been exposed in a transcript), then update the live .env and run php artisan config:clear — the code change alone won't reach the server's cached value.
2026-09-07	(carried forward)	Decide whether Check & Recheck should get its own attachment route, so a reviewer without the Invoice Payments grant can open a slip they just uploaded.
2026-09-07	(carried forward)	SG 40063 (id 17928) is off by 7.60 — pre-existing, the stacked-op case pnl:repair-line-totals was written for and never run with --apply. Left alone by instruction.
2026-09-07	(carried forward)	Confirm the target branch for the AHS lifestyle results work.
2026-09-07	Booking System / OPS — Next.js	Run npx prisma db execute --file prisma/sql/2026-09-07-query-monitor-manual-mirror.sql before deploying — the Prisma client selects the new columns as soon as the new code runs, so the Queries tab errors if the order is reversed. Not run here: the local .env resolves to the live AWS database and it is a production schema change.
2026-09-07	Booking System / OPS — Next.js	The four ... bak 0811-0809 archive tabs are still on the workbook. Eleven worksheets on one file is plausibly why SharePoint keeps throwing FileOpenHostServiceUnavailable; the new retry masks that rather than removing it.
2026-09-07	Booking System / OPS — Next.js	cancelledAt has no index, so the attrition query scans. Fine once a week or month, but a monthly preview will be slower than a daily one.

Date	System / Project	Outstanding item
2026-09-08	(carried forward)	Run the accounts migration before deploying OPS — php artisan migrate --pretend, then without it. Until then OPS's actuals reads degrade gracefully but saves will error.
2026-09-08	(carried forward)	Grant the new driver_settlements page to the relevant roles in the permission picker.
2026-09-08	(carried forward)	Extend cohortFrom/cohortTo to /print/bookings-list and the bookings Excel route, so exports follow the cohort filter.
2026-09-08	(carried forward)	Put DB_QUEUE_RETRY_AFTER=3900 into the live .env and pick up the 2G pm2 change — the .env.example entry doesn't reach the server.
2026-09-08	(carried forward)	Decide whether the invoice mail should get its completeness proof back in some other form, now that the cohort block is gone from it.
2026-09-08	(carried forward)	Confirm b2c (Aahaas P&L) and aahaas (Aahaas invoices) manual sends by pressing Run now on the Aahaas card of each page.
2026-09-08	(carried forward)	Investigate the N+1 in the report builders — it is now behind three separate symptoms (preview timeouts, View, Excel).
2026-09-08	(carried forward)	Check whether a hook is auto-committing and pushing to LIVE-1.0.0v and REV1.
2026-09-08	(carried forward)	Re-word the "entered here later" label, or split it, so it doesn't claim a direction the two-sided test doesn't measure.
2026-09-08	Booking System / OPS — Next.js	The exports don't follow the cohort. Download PDF / Excel still build from the date filters, so with the cohort on they produce 68 rows against a screen showing 71. /print/bookings-list and the Excel route need the same cohortFrom/cohortTo params.
2026-09-08	Booking System / OPS — Next.js	The +8 label is narrower than the number. inWindow is a two-sided test, so the "entered here later" bucket also collects cohort rows created before the window — a booking that sat as a draft for days and only got its confirmation on the 7th counts toward the same +8. The arithmetic is correct; only the wording is.
2026-09-08	Booking System / OPS — Next.js	Something in the environment auto-committed and pushed the settlement work while it was still being written — 5379276 on LIVE-1.0.0v and 4b473f5 on REV1, both already at origin, with a generic message on the accounts side. No git command was run by hand. Worth checking whether that is a hook you want running on live branches.
2026-09-09	(carried forward)	Commit PayableV11Controller.php — the 1.1 re-basing work is finished but still sitting in the working tree on REV1.
2026-09-09	(carried forward)	Send the IndusInd account details (account_name, account_no, branch, ifsc_code, bank_address) and confirm whose account it is — the migration has run, so the mode is live with a blank account block.
2026-09-09	(carried forward)	Write the .fdeck- stylesheet on AHS* — the markup shipped, the CSS file it imported never existed and the import has been removed.
2026-09-09	(carried forward)	Decide on the 35 Others rows with transport wording in Payable 1.1, and whether learned splits should be cleared so new splits pick Transport up straight away. The list can be shown before anything moves.
2026-09-09	(carried forward)	Take the Vietnam missing-products document to the rate team — starting with Group A, where the row exists and only the price cells are blank.
2026-09-09	(carried forward)	Fix the import-side reporting bug the document exposes: an unpriced row is discarded at import, so the email calls it "not listed" when it is listed.
2026-09-09	(carried forward)	Rotate TM_RESET_CODE, or restore emailed links, once Graph Mail.Send is granted.
2026-09-09	(carried forward)	Still open from yesterday: extend cohortFrom/cohortTo to /print/bookings-list and the bookings Excel route; put DB_QUEUE_RETRY_AFTER=3900 into the live .env and pick up the 2G pm2 change; confirm the b2c and aahaas manual sends; investigate the N+1 in the report builders; re-word the "entered here later" label.

Date	System / Project	Outstanding item
2026-09-10	(carried forward)	Run the B2C repair on the live box. b2c:pnl-check 14277 first (expect 1,101.37 / 969.54 / 131.83 on the snapshot row), then b2c:pnl-resync --dry-run for the size of the correction, then the real run. Anything older than the 3-day rolling sweep will never re-price itself.
2026-09-10	(carried forward)	Run as-pnl:import "VN 19878" "VN 19919" on the live box — --dry-run first. Both are code-verified only; this machine cannot reach the production database or the AS API.
2026-09-10	(carried forward)	Send the payables:why "VN 41531" / "VN 40689" output. If Bamboo Sapa comes back with its line dated off the booking's arrival, it is a free-text cost.other charge and needs the larger fix: giving cost.other and product lines their own dates from the itinerary.
2026-09-10	(carried forward)	Verify the Payable 1.1 invoice columns against the Pay popup for a booking or two — the lookup was never smoke-tested against real rows.
2026-09-10	(carried forward)	Watch the boards shed lines the first day rejectSupersededRevisions() is live; it touches all four countries, not only Vietnam.
2026-09-10	(carried forward)	Decide whether AsPnlSyncService should write pnl_records.end_date — the stay pass works around it, but every AS-synced row is still missing the column, and the real behaviour of the existing rows is not fully explained by the sync code.
2026-09-10	(carried forward)	Consider warming the payable days on the nightly schedule if a ~20s cold load is too slow on the live box; the Activity basis at ~292s cold is worse and pre-existing.
2026-09-10	(carried forward)	Decide on PROTECTED_KEYS for the full-cancel setting keys — critical-services password, or the current ack + admin-only + typed-ref gates.
2026-09-10	(carried forward)	Check bank details on live drivers once OPS deploys — if the No account badge comes up amber across the board, the gap is in the driver register, not the register page.
2026-09-10	(carried forward)	Decide whether the Package cost column should fall back to the derived figure when nothing has been saved on the Transport settlement sheet.
2026-09-10	(carried forward)	The branch moved without anyone asking, twice today — commits appeared on Accounts REV1 mid-session, and two commits were pushed to origin/LIVE-1.0.0v during the Activity Check build. Nothing broken shipped, but worth finding what is doing it.
2026-09-10	(carried forward)	Write the .fdeck- stylesheet on AHS* (carried from yesterday), and rotate TM_RESET_CODE once Graph Mail.Send is granted.
2026-09-10	(carried forward)	Still open from earlier: the 35 Payable 1.1 Others rows with transport wording and the learned splits behind them; the Vietnam missing-products document with the rate team, and the import-side bug that reports an unpriced row as "not listed"; cohortFrom/cohortTo on /print/bookings-list and the bookings Excel route; DB_QUEUE_RETRY_AFTER=3900 and the 2G pm2 change on the live .env; the IndusInd acco

5. Planned daily checklists

Six pre-written daily task checklists (275 items) exist for 22, 24 and 31 August 2026. **No item was ever ticked in those files**, so no completion can be claimed from them. They are listed here as planned scope only; the work actually delivered is evidenced in section 3.

Date	System	Section	Planned task	Recorded state
2026-08-22	Accounts System	Proforma invoice listing and filters — high priority	Open the Proforma Invoice page and confirm the new view structure renders correctly.	NOT TICKED
2026-08-22	Accounts System	Proforma invoice listing and filters — high priority	Verify the listing supports the expected filters: country, booking/reference number, supplier, invoice status, settlement status, date range, and search text where available.	NOT TICKED
2026-08-22	Accounts System	Proforma invoice listing and filters — high priority	Confirm filter combinations narrow results correctly and clearing filters restores the full permitted list.	NOT TICKED
2026-08-22	Accounts System	Proforma invoice listing and filters — high priority	Confirm empty results show an explicit empty state rather than a false success message.	NOT TICKED
2026-08-22	Accounts System	Proforma invoice listing and filters — high priority	Verify recent invoices are displayed in the correct section with invoice number, booking/reference, amount, currency, date, and settlement status.	NOT TICKED
2026-08-22	Accounts System	Proforma invoice listing and filters — high priority	Confirm invoice data is scoped correctly and one booking's invoices cannot appear under another booking.	NOT TICKED
2026-08-22	Accounts System	Proforma invoice listing and filters — high priority	Verify pagination or result limits do not hide matching records without a clear indicator.	NOT TICKED
2026-08-22	Accounts System	Proforma invoice listing and filters — high priority	Check that invoice numbers, reference numbers, control numbers, and account identifiers preserve leading zeros.	NOT TICKED
2026-08-22	Accounts System	Auto-match workflow	Test auto-match using a clearly matching invoice and confirm the proposed booking/reference is correct.	NOT TICKED
2026-08-22	Accounts System	Auto-match workflow	Test an invoice with multiple possible matches and confirm the system requires user review instead of choosing silently.	NOT TICKED
2026-08-22	Accounts System	Auto-match workflow	Test an invoice with no match and confirm it remains visibly unmatched with a useful explanation.	NOT TICKED
2026-08-22	Accounts System	Auto-match workflow	Verify scoped lookup rules prevent a match from another country, supplier, or unrelated booking.	NOT TICKED
2026-08-22	Accounts System	Auto-match workflow	Confirm matching records the matched relationship and actor/time information required for auditability.	NOT TICKED
2026-08-22	Accounts System	Auto-match workflow	Repeat the same auto-match request and confirm it is idempotent: no duplicate match, settlement, or ledger entry is created.	NOT TICKED

Date	System	Section	Planned task	Recorded state
2026-08-22	Accounts System	Auto-match workflow	Verify changing or clearing a match is permission-gated and does not delete the source invoice.	NOT TICKED
2026-08-22	Accounts System	Settlement and payment safety	Review ProformaInvoiceController, ProformaSettlementService, models, routes, and migration for precise status transitions.	NOT TICKED
2026-08-22	Accounts System	Settlement and payment safety	Confirm only the permitted statuses can move to settled/paid and invalid transitions are rejected.	NOT TICKED
2026-08-22	Accounts System	Settlement and payment safety	Verify settlement amounts cannot exceed the invoice balance or create a negative remaining balance unintentionally.	NOT TICKED
2026-08-22	Accounts System	Settlement and payment safety	Test partial settlement, full settlement, repeated submission, and a zero/invalid amount in a local or isolated test database.	NOT TICKED
2026-08-22	Accounts System	Settlement and payment safety	Confirm payment references, remarks, receipt URLs, and settlement timestamps are retained after refresh.	NOT TICKED
2026-08-22	Accounts System	Settlement and payment safety	Verify failed settlement attempts do not partially write a payment or mark an invoice as settled.	NOT TICKED
2026-08-22	Accounts System	Settlement and payment safety	Confirm the status shown in the list, detail view, recent-invoice panel, and Payable 1.0 is consistent.	NOT TICKED
2026-08-22	Accounts System	Settlement and payment safety	Check that settlement actions are protected by access configuration and server-side authorization, not only hidden in the UI.	NOT TICKED
2026-08-22	Accounts System	Receipt URL and document handling	Verify a valid receipt URL is displayed as a safe, clickable link.	NOT TICKED
2026-08-22	Accounts System	Receipt URL and document handling	Verify missing, malformed, or unavailable receipt URLs show a safe fallback and do not break the invoice page.	NOT TICKED
2026-08-22	Accounts System	Receipt URL and document handling	Confirm URLs are escaped/sanitised before rendering and cannot inject markup or scripts.	NOT TICKED
2026-08-22	Accounts System	Receipt URL and document handling	Confirm the receipt link belongs to the selected proforma settlement and cannot be replaced by another invoice's URL.	NOT TICKED
2026-08-22	Accounts System	Receipt URL and document handling	Check storage/filesystem configuration for the intended disk and confirm no credentials or private paths are exposed.	NOT TICKED
2026-08-22	Accounts System	Existing Accounts workflows regression	Confirm Payable 1.0 still loads and existing filters, payment detail, remarks, and exports remain available.	NOT TICKED
2026-08-22	Accounts System	Existing Accounts workflows regression	Confirm non-credit invoice search still matches invoice and reference numbers and only shows the latest revision.	NOT TICKED

Date	System	Section	Planned task	Recorded state
2026-08-22	Accounts System	Existing Accounts workflows regression	Confirm Sri Lanka transport settlement requests still appear in the correct settlement window and status transitions remain controlled.	NOT TICKED
2026-08-22	Accounts System	Existing Accounts workflows regression	Confirm existing role/access catalogue entries remain unchanged except for the intended Proforma permissions.	NOT TICKED
2026-08-22	Accounts System	Existing Accounts workflows regression	Check invoice email/report actions are not triggered during testing.	NOT TICKED
2026-08-22	Accounts System	Existing Accounts workflows regression	Review logs for SQL errors, missing columns, failed lookups, authorization failures, and accidental external-service calls.	NOT TICKED
2026-08-22	Accounts System	Safe test and release preparation	Read SAFETY.md before any command that could touch database, email, external APIs, or deployment state.	NOT TICKED
2026-08-22	Accounts System	Safe test and release preparation	Run php artisan migrate --pretend only against the intended local/test configuration if migration review is required; never run reset, refresh, rollback, wipe, seed, or destructive SQL.	NOT TICKED
2026-08-22	Accounts System	Safe test and release preparation	Confirm the PHPUnit test connection is local and isolated before running tests; do not bypass the production-host guard.	NOT TICKED
2026-08-22	Accounts System	Safe test and release preparation	Run the frontend build from email-invoice-processor/ and inspect compiled output for errors.	NOT TICKED
2026-08-22	Accounts System	Safe test and release preparation	Run targeted Proforma tests for listing, filters, auto-match, settlement, duplicate prevention, and receipt URL handling.	NOT TICKED
2026-08-22	Accounts System	Safe test and release preparation	Review the final diff and migration for additive, reversible changes and precise WHERE clauses on any update.	NOT TICKED
2026-08-22	Accounts System	Safe test and release preparation	Verify no secrets, production URLs, payment data, or customer information were added to source control.	NOT TICKED
2026-08-22	Accounts System	Handoff checklist	Document the exact routes, permissions, and statuses verified.	NOT TICKED
2026-08-22	Accounts System	Handoff checklist	Record test references and expected/actual outcomes without including sensitive customer or payment data.	NOT TICKED
2026-08-22	Accounts System	Handoff checklist	List any unresolved issue with severity and whether it blocks release.	NOT TICKED
2026-08-22	Accounts System	Handoff checklist	Obtain finance approval before testing a real payment/settlement write or sending any invoice email.	NOT TICKED
2026-08-22	Accounts System	Handoff checklist	Prepare deployment notes for the Proforma page, auto-match logic, settlement service, receipt URLs, and UI structure.	NOT TICKED

Date	System	Section	Planned task	Recorded state
2026-08-22	Booking System	Proforma invoice workflow — high priority	Open /dashboard/proforma and confirm the page loads without client or server errors.	NOT TICKED
2026-08-22	Booking System	Proforma invoice workflow — high priority	Verify proforma search works by booking reference, invoice identifier, and the available scoped lookup fields.	NOT TICKED
2026-08-22	Booking System	Proforma invoice workflow — high priority	Confirm the booking selector displays the lead passenger using the new name field and does not depend on the removed fullName property.	NOT TICKED
2026-08-22	Booking System	Proforma invoice workflow — high priority	Confirm the invoice form preserves the selected booking, passenger, currency, amount, and description while navigating between form sections.	NOT TICKED
2026-08-22	Booking System	Proforma invoice workflow — high priority	Test the booking-specific endpoint /api/proforma/booking/[ref] with a safe read-only request.	NOT TICKED
2026-08-22	Booking System	Proforma invoice workflow — high priority	Test the general list/search endpoints with empty, partial, and valid search criteria; confirm invalid input returns a clear validation response.	NOT TICKED
2026-08-22	Booking System	Proforma invoice workflow — high priority	Confirm the proforma detail endpoint returns the correct record and does not expose unrelated booking or payment data.	NOT TICKED
2026-08-22	Booking System	Proforma invoice workflow — high priority	Confirm receipt URL handling displays a usable link when a receipt exists and a clear empty state when it does not.	NOT TICKED
2026-08-22	Booking System	Proforma invoice workflow — high priority	Verify recent invoices are separated from new invoice creation and that already-settled items display their settlement status correctly.	NOT TICKED
2026-08-22	Booking System	Proforma invoice workflow — high priority	Verify duplicate or already-matched invoices cannot be silently settled twice.	NOT TICKED
2026-08-22	Booking System	Proforma invoice workflow — high priority	Cross-check one read-only sample against the Accounts System so booking reference, lead passenger, invoice amount, and status agree.	NOT TICKED
2026-08-22	Booking System	Hotel reservation operations	Open the reservations dashboard and verify the request inbox, reservation list, deadline board, hotel directory, invoices, and credit-notes pages load.	NOT TICKED
2026-08-22	Booking System	Hotel reservation operations	Confirm request-inbox filters work for country and urgency without changing the underlying records.	NOT TICKED
2026-08-22	Booking System	Hotel reservation operations	Confirm CSV export follows the active filters and uses stable column headings.	NOT TICKED
2026-08-22	Booking System	Hotel reservation operations	Verify hotel directory lookup returns the correct hotel and that hotel details/availability routes use the expected identifier.	NOT TICKED
2026-08-22	Booking System	Hotel reservation operations	Check reservation drawer rendering for contact data, options, special requests, contracts, invoices, and credit notes.	NOT TICKED

Date	System	Section	Planned task	Recorded state
2026-08-22	Booking System	Hotel reservation operations	Verify reservation state labels and transition controls match the permitted workflow; invalid transitions must be rejected with a useful message.	NOT TICKED
2026-08-22	Booking System	Hotel reservation operations	Confirm gate/checklist rules prevent incomplete reservations from moving forward.	NOT TICKED
2026-08-22	Booking System	Hotel reservation operations	Verify supplier/partner details are scoped to the selected reservation and cannot leak into another reservation.	NOT TICKED
2026-08-22	Booking System	Hotel reservation operations	Confirm all reservation write actions remain behind the reservation guard and correct role permissions.	NOT TICKED
2026-08-22	Booking System	Hotel reservation operations	Check loading, empty, error, and permission-denied states for each new reservation screen.	NOT TICKED
2026-08-22	Booking System	Passenger and agenda data quality	Search bookings with one passenger, multiple passengers, and missing optional passenger data.	NOT TICKED
2026-08-22	Booking System	Passenger and agenda data quality	Confirm the lead passenger's name is selected consistently in proforma, booking details, and related forms.	NOT TICKED
2026-08-22	Booking System	Passenger and agenda data quality	Confirm no UI still reads fullName where the new passenger contract expects name.	NOT TICKED
2026-08-22	Booking System	Passenger and agenda data quality	Test agenda item date validation with valid dates, same-day dates, reversed dates, malformed dates, and dates outside the booking period.	NOT TICKED
2026-08-22	Booking System	Passenger and agenda data quality	Verify invalid agenda dates are rejected before persistence and that the user receives an actionable validation message.	NOT TICKED
2026-08-22	Booking System	Passenger and agenda data quality	Confirm existing valid agenda items still render correctly after validation changes.	NOT TICKED
2026-08-22	Booking System	Roles and access control	Verify RS_USER is available for the intended countries only and does not grant unrelated admin access.	NOT TICKED
2026-08-22	Booking System	Roles and access control	Check sidebar visibility for Admin, Operations, Reservation Team, and restricted users.	NOT TICKED
2026-08-22	Booking System	Roles and access control	Verify API routes enforce permissions server-side even when a restricted user manually enters a URL.	NOT TICKED
2026-08-22	Booking System	Roles and access control	Confirm reservation, proforma, and booking actions show a clear denied response rather than a generic server error.	NOT TICKED
2026-08-22	Booking System	Roles and access control	Review the role and reservation guard code for accidental broad access before any deployment.	NOT TICKED
2026-08-22	Booking System	Technical verification	Run the Booking System lint/build checks from apple-holidays/ after confirming they do not connect to or modify live data.	NOT TICKED

Date	System	Section	Planned task	Recorded state
2026-08-22	Booking System	Technical verification	Run targeted read-only checks for proforma and reservations.	NOT TICKED
2026-08-22	Booking System	Technical verification	Run existing safe regression checks: drivelog:guard, drivelog:render, sldocs:render, and relevant reservation preflight checks where their environment is local/safe.	NOT TICKED
2026-08-22	Booking System	Technical verification	Review server logs for route errors, Prisma errors, failed imports, and hydration warnings.	NOT TICKED
2026-08-22	Booking System	Technical verification	Confirm environment/configuration changes are documented in .env.example and do not contain secrets.	NOT TICKED
2026-08-22	Booking System	Technical verification	Review the final diff for accidental changes outside today's Booking System scope.	NOT TICKED
2026-08-22	Booking System	Handoff checklist	Record tested routes, test data/reference numbers, and results.	NOT TICKED
2026-08-22	Booking System	Handoff checklist	List any remaining issue with severity, reproduction steps, and affected role.	NOT TICKED
2026-08-22	Booking System	Handoff checklist	Confirm whether database migration or role application is required; do not execute either against live data without approval.	NOT TICKED
2026-08-22	Booking System	Handoff checklist	Prepare a short deployment note covering proforma, reservations, passenger naming, agenda validation, and access-control changes.	NOT TICKED
2026-08-22	Booking System	Handoff checklist	Obtain business confirmation for the proforma settlement and reservation workflow before production rollout.	NOT TICKED
2026-08-24	Accounts System	Proforma document viewer and payable/receipt popup — high priority	Open the Proforma Invoice page and confirm the invoice list renders and every invoice can be opened (the earlier "cannot view invoices" failure must not reproduce).	NOT TICKED
2026-08-24	Accounts System	Proforma document viewer and payable/receipt popup — high priority	Confirm the popup shows the payable detail and the receipt document side by side, for the same settlement, in one view.	NOT TICKED
2026-08-24	Accounts System	Proforma document viewer and payable/receipt popup — high priority	Verify the document viewer route added in routes/web.php streams the file for the selected invoice only and cannot be pointed at another invoice's document.	NOT TICKED
2026-08-24	Accounts System	Proforma document viewer and payable/receipt popup — high priority	Test a missing / malformed / expired document reference and confirm a safe fallback instead of a broken page or a raw exception.	NOT TICKED
2026-08-24	Accounts System	Proforma document viewer and payable/receipt popup — high priority	Confirm the viewer route is permission-gated server-side, not only hidden in the blade view.	NOT TICKED
2026-08-24	Accounts System	Proforma document viewer and payable/receipt popup — high priority	Check invoice numbers, reference numbers and account identifiers keep their leading zeros in the popup.	NOT TICKED

Date	System	Section	Planned task	Recorded state
2026-08-24	Accounts System	S3 / filesystem configuration	Review the new keys added to .env.example and config/filesystems.php and confirm each one is documented for deployment.	NOT TICKED
2026-08-24	Accounts System	S3 / filesystem configuration	Confirm the intended disk is used for proforma documents and no credentials, private paths or bucket names leak into the rendered page or logs.	NOT TICKED
2026-08-24	Accounts System	S3 / filesystem configuration	Verify behaviour when the S3 credentials are absent: the page must degrade, not fatal.	NOT TICKED
2026-08-24	Accounts System	S3 / filesystem configuration	Confirm no production bucket values were committed to source control.	NOT TICKED
2026-08-24	Accounts System	Payable summary fallback to P&L cost	Review the change in ProformaSettlementService that uses the P&L cost when no payable record exists.	NOT TICKED
2026-08-24	Accounts System	Payable summary fallback to P&L cost	Confirm the fallback only applies when a payable row genuinely does not exist, and never overrides an existing payable amount.	NOT TICKED
2026-08-24	Accounts System	Payable summary fallback to P&L cost	Verify the currency of the P&L cost matches the currency shown in the summary; no silent mixing.	NOT TICKED
2026-08-24	Accounts System	Payable summary fallback to P&L cost	Cross-check a few bookings against Payable 1.0 and confirm the summary figures agree.	NOT TICKED
2026-08-24	Accounts System	Payable summary fallback to P&L cost	Confirm the fallback is display/summary only and does not create or write a payable row.	NOT TICKED
2026-08-24	Accounts System	Payable summary fallback to P&L cost	Verify a suitable payable in Payable 1.0 is linked to the proforma invoice where one exists, and that matching stays scoped to the same booking/supplier.	NOT TICKED
2026-08-24	Accounts System	Vietnam Excel price service — pricing logic and errors	Review the changes in VietnamExcelPriceService, MissingProductService, ExcelProductRate and detailed-pnl-scripts.blade.php.	NOT TICKED
2026-08-24	Accounts System	Vietnam Excel price service — pricing logic and errors	Re-price a sample of Vietnam P&Ls and confirm corrected nett rates are plausible; implausible rates must still be refused, not written.	NOT TICKED
2026-08-24	Accounts System	Vietnam Excel price service — pricing logic and errors	Confirm improved error handling reports the reason per product instead of failing the whole run.	NOT TICKED
2026-08-24	Accounts System	Vietnam Excel price service — pricing logic and errors	Verify the Detailed P&L panel shows the new pricing/erro/state messages correctly in the UI.	NOT TICKED
2026-08-24	Accounts System	Vietnam Excel price service — pricing logic and errors	Confirm no P&L is repriced silently without an audit trail.	NOT TICKED
2026-08-24	Accounts System	Missing-products mail and agent replies	Re-check the "Daily Missing Products (Vietnam)" list for 21/08/2026 (22 products) against the current rate sheet.	NOT TICKED
2026-08-24	Accounts System	Missing-products mail and agent replies	For products the agent has already replied as rated, confirm they now resolve and drop off the missing list.	NOT TICKED

Date	System	Section	Planned task	Recorded state
2026-08-24	Accounts System	Missing-products mail and agent replies	Confirm products still genuinely unrated remain listed with a clear reason.	NOT TICKED
2026-08-24	Accounts System	Missing-products mail and agent replies	Verify the daily missing-products email content before any send, and do not send to real recipients without approval.	NOT TICKED
2026-08-24	Accounts System	Missing-products mail and agent replies	Confirm clearing/acknowledging a missing product is recorded and reversible.	NOT TICKED
2026-08-24	Accounts System	Regression and safe testing	Confirm Payable 1.0 still loads with its filters, sections, driver advance and exports unaffected.	NOT TICKED
2026-08-24	Accounts System	Regression and safe testing	Confirm invoice search, revision handling and is_latest behaviour are unchanged.	NOT TICKED
2026-08-24	Accounts System	Regression and safe testing	Read SAFETY.md before any command touching database, email, external APIs or deployment.	NOT TICKED
2026-08-24	Accounts System	Regression and safe testing	Use php artisan migrate --pretend only against a local/test connection; never reset, refresh, rollback, wipe, seed, or run unscoped SQL.	NOT TICKED
2026-08-24	Accounts System	Regression and safe testing	Confirm the PHPUnit test connection is local before running tests; never bypass the production-host guard.	NOT TICKED
2026-08-24	Accounts System	Regression and safe testing	Review logs for SQL errors, authorisation failures, S3 errors and accidental external calls.	NOT TICKED
2026-08-24	Accounts System	Handoff checklist	Document the routes, permissions and configuration keys verified today.	NOT TICKED
2026-08-24	Accounts System	Handoff checklist	Record test references and expected/actual results without sensitive customer or payment data.	NOT TICKED
2026-08-24	Accounts System	Handoff checklist	List unresolved issues with severity and release impact.	NOT TICKED
2026-08-24	Accounts System	Handoff checklist	Prepare deployment notes: proforma viewer route, S3 config keys, payable summary fallback, Vietnam pricing changes.	NOT TICKED
2026-08-24	Accounts System	Handoff checklist	Obtain finance approval before any real settlement write or invoice email.	NOT TICKED
2026-08-24	Booking System	WhatsApp booking document delivery via approved template — high priority	Confirm aahaas_booking_docs (and any related booking template) is APPROVED in the Meta account before any live test.	NOT TICKED
2026-08-24	Booking System	WhatsApp booking document delivery via approved template — high priority	Verify POST /api/whatsapp/templates/bootstrap-booking registers the template correctly and returns a clear status when Meta has not yet approved it.	NOT TICKED
2026-08-24	Booking System	WhatsApp booking document delivery via approved template — high priority	Confirm WHATSAPP_APP_ID and related credentials are present in the deployment environment and not committed to source control.	NOT TICKED

Date	System	Section	Planned task	Recorded state
2026-08-24	Booking System	WhatsApp booking document delivery via approved template — high priority	Test booking-details send from /dashboard/bookings/[ref] with the 24-hour window OPEN: message and document must both arrive.	NOT TICKED
2026-08-24	Booking System	WhatsApp booking document delivery via approved template — high priority	Test with the window CLOSED: the opener template must be sent and the document queued, then delivered once the window opens.	NOT TICKED
2026-08-24	Booking System	WhatsApp booking document delivery via approved template — high priority	Confirm the queued document is delivered exactly once — no duplicate send after the window opens.	NOT TICKED
2026-08-24	Booking System	WhatsApp booking document delivery via approved template — high priority	Test the agenda send path (/api/bookings/[ref]/agenda/send) for both PDF and Word attachments; the Word case was the reported failure.	NOT TICKED
2026-08-24	Booking System	WhatsApp booking document delivery via approved template — high priority	Confirm failures return 422 with a readable explanation in the UI rather than a generic 500.	NOT TICKED
2026-08-24	Booking System	WhatsApp booking document delivery via approved template — high priority	Verify template variable mapping in booking-details-template.ts renders the correct booking reference, guest name and dates.	NOT TICKED
2026-08-24	Booking System	Driver document delivery and receipts	Confirm the existing driver document sending flow is unchanged and still works — it must not regress from the booking-template work.	NOT TICKED
2026-08-24	Booking System	Driver document delivery and receipts	Test the Drive Log Documents WhatsApp dialog and confirm delivery receipts are recorded per driver and per document.	NOT TICKED
2026-08-24	Booking System	Driver document delivery and receipts	Verify /api/dashboard/srilanka/drive-log/documents/deliveries returns the correct receipt history and copy-contact behaves as expected.	NOT TICKED
2026-08-24	Booking System	Driver document delivery and receipts	Check the Driver Chat Dock renders the thread and status without blocking the page.	NOT TICKED
2026-08-24	Booking System	Driver document delivery and receipts	Review prisma/schema.prisma and prisma/sql/2026-08-24-sl-driver-doc-sends.sql; apply only through the intended script and only with approval — never against live data unreviewed.	NOT TICKED
2026-08-24	Booking System	Driver document delivery and receipts	Confirm the removed Driver Log List page is no longer linked from the sidebar and no route 404s remain.	NOT TICKED
2026-08-24	Booking System	WhatsApp delivery status	Verify the webhook split: /api/webhooks/whatsapp and the new /api/webhooks/whatsapp-status-signal both respond correctly.	NOT TICKED
2026-08-24	Booking System	WhatsApp delivery status	Confirm sent / delivered / read / failed statuses map correctly in whatsapp-delivery-status.ts and surface in Drive Log.	NOT TICKED

Date	System	Section	Planned task	Recorded state
2026-08-24	Booking System	WhatsApp delivery status	Confirm an unknown or out-of-order status callback is ignored safely and never downgrades a later status.	NOT TICKED
2026-08-24	Booking System	WhatsApp delivery status	Verify the endpoint validates the caller and cannot be used to spoof a delivery status.	NOT TICKED
2026-08-24	Booking System	WhatsApp delivery status	Confirm serverless constraints are respected (no long-lived connections in the webhook path).	NOT TICKED
2026-08-24	Booking System	Confirm Booking Hotels page — reservation team	Open /dashboard/confirm-hotels and confirm it loads for reservation-team roles only.	NOT TICKED
2026-08-24	Booking System	Confirm Booking Hotels page — reservation team	Test filters: Check-In, Check-Out, Continue Stay, ALL; country filter; date filter for today / tomorrow / custom date.	NOT TICKED
2026-08-24	Booking System	Confirm Booking Hotels page — reservation team	Verify IS-number search returns the right booking and nothing from another country the user cannot see.	NOT TICKED
2026-08-24	Booking System	Confirm Booking Hotels page — reservation team	Confirm the movement logic in hotel-movements.ts / hotel-movements-shared.ts classifies check-in, check-out and continuing stays correctly across multi-night stays.	NOT TICKED
2026-08-24	Booking System	Confirm Booking Hotels page — reservation team	Verify the middleware and rbac.ts changes restrict the route server-side, not only in the sidebar.	NOT TICKED
2026-08-24	Booking System	Confirm Booking Hotels page — reservation team	Confirm hotel details remain read-only from this page — no upstream hotel record is modified.	NOT TICKED
2026-08-24	Booking System	Confirm Booking Hotels page — reservation team	Check the empty state and the behaviour when a booking has no hotel movement for the selected day.	NOT TICKED
2026-08-24	Booking System	Partner analytics module	Open /dashboard/ground/analytics and confirm the leaderboard and partner detail load without errors.	NOT TICKED
2026-08-24	Booking System	Partner analytics module	Verify /api/ground/analytics/leaderboard and /api/ground/analytics/partner aggregate the correct period and exclude cancelled bookings.	NOT TICKED
2026-08-24	Booking System	Partner analytics module	Cross-check a few partner scores and feedback counts against the underlying records.	NOT TICKED
2026-08-24	Booking System	Partner analytics module	Confirm the drivers and vendors pages still work after the shared-component changes.	NOT TICKED
2026-08-24	Booking System	Partner analytics module	Confirm the analytics routes are access-controlled and no partner sees another partner's data.	NOT TICKED
2026-08-24	Booking System	Partner analytics module	Verify /api/reservations/hotels/availability and the hotels page addition read only from the B2C source.	NOT TICKED

Date	System	Section	Planned task	Recorded state
2026-08-24	Booking System	Proforma page and all-mails ordering	Confirm /dashboard/proforma opens on the approved / payment-done tab by default and the Pending tab shows only pending invoices.	NOT TICKED
2026-08-24	Booking System	Proforma page and all-mails ordering	Verify filtering and sorting behave with the new default tab and that switching tabs does not lose filters unexpectedly.	NOT TICKED
2026-08-24	Booking System	Proforma page and all-mails ordering	Confirm the Query Monitoring "All Mails" sheet exports oldest first, newest at the bottom, in both the sheet and the page listing.	NOT TICKED
2026-08-24	Booking System	Proforma page and all-mails ordering	Re-export the workbook and confirm the order and dates are correct.	NOT TICKED
2026-08-24	Booking System	Safe test and release preparation	Use test numbers for every WhatsApp check; do not message a real customer or driver without approval.	NOT TICKED
2026-08-24	Booking System	Safe test and release preparation	Confirm no Prisma migration or SQL script is run against live data without explicit sign-off.	NOT TICKED
2026-08-24	Booking System	Safe test and release preparation	Run the build and inspect for type and lint errors across the new pages and libraries.	NOT TICKED
2026-08-24	Booking System	Safe test and release preparation	Review the diff for secrets, tokens, production URLs or customer data.	NOT TICKED
2026-08-24	Booking System	Safe test and release preparation	Check logs for Meta API errors, 422 responses, webhook failures and DB connection issues on the serverless runtime.	NOT TICKED
2026-08-24	Booking System	Handoff checklist	Record tested routes, template names, test numbers and results.	NOT TICKED
2026-08-24	Booking System	Handoff checklist	Note the Meta template approval state and any pending approval that blocks release.	NOT TICKED
2026-08-24	Booking System	Handoff checklist	List remaining issues with severity, reproduction steps and affected role.	NOT TICKED
2026-08-24	Booking System	Handoff checklist	Prepare a deployment note covering WhatsApp templates and env keys, driver doc receipts schema, Confirm Booking Hotels access, partner analytics and the proforma default tab.	NOT TICKED
2026-08-24	Booking System	Handoff checklist	Get Operations confirmation before enabling customer-facing WhatsApp sends in production.	NOT TICKED
2026-08-31	Accounts System	Aahaas B2B (Flights) module — new, read-only — high priority	Confirm the new b2b connection in config/database.php points at the agent-portal schema and is used read-only — no model writes, no migrations, no seeds on it.	NOT TICKED
2026-08-31	Accounts System	Aahaas B2B (Flights) module — new, read-only — high priority	Verify .env.example documents every new B2B key and that no live credential was committed.	NOT TICKED
2026-08-31	Accounts System	Aahaas B2B (Flights) module — new, read-only — high priority	Open /dashboard/b2b-flights (list) — confirm only confirmed, non-deleted bookings appear, newest first.	NOT TICKED

Date	System	Section	Planned task	Recorded state
2026-08-31	Accounts System	Aahaas B2B (Flights) module — new, read-only — high priority	Test filters and search: reference, PNR, hotel name, policy number, passenger blob, payment status, component, booked-date range.	NOT TICKED
2026-08-31	Accounts System	Aahaas B2B (Flights) module — new, read-only — high priority	Open a booking detail page and cross-check flights, hotels, insurance and experiences against the raw JSON inspector — segments and passenger manifest must populate on a real row.	NOT TICKED
2026-08-31	Accounts System	Aahaas B2B (Flights) module — new, read-only — high priority	Verify the table-existence probe (2637d36) behaves correctly where a b2b_* component table is missing: warn and degrade, never fatal.	NOT TICKED
2026-08-31	Accounts System	Aahaas B2B (Flights) module — new, read-only — high priority	Confirm the trimmed database-name return value is correct on both connections.	NOT TICKED
2026-08-31	Accounts System	Aahaas B2B (Flights) module — new, read-only — high priority	Test "View invoice" (HTML), "Invoice PDF" and "Download details" — check the per-component lines, subtotal, adjustment row and Paid/Unpaid stamp.	NOT TICKED
2026-08-31	Accounts System	Aahaas B2B (Flights) module — new, read-only — high priority	Confirm mixed component currencies are declared, never summed.	NOT TICKED
2026-08-31	Accounts System	Aahaas B2B (Flights) module — new, read-only — high priority	Verify the access.php grants: only the intended roles see the sidebar entry, and the route is blocked server-side for everyone else.	NOT TICKED
2026-08-31	Accounts System	Aahaas B2B (Flights) module — new, read-only — high priority	Reconcile a sample of B2B totals against the Flighths_dash source before showing anyone the figures.	NOT TICKED
2026-08-31	Accounts System	Report Studio — /reports/month-wise rebuilt	Confirm every query in the Studio path is a SELECT — re-run the smoke pass behind the DB::listen guard that throws on insert/update/delete/drop/truncate/alter/create.	NOT TICKED
2026-08-31	Accounts System	Report Studio — /reports/month-wise rebuilt	Verify old links still resolve identically: ? month=&year= and ?start_date=&end_date=.	NOT TICKED
2026-08-31	Accounts System	Report Studio — /reports/month-wise rebuilt	Test each period mode — Day / Week / Month / 3 months / Year / Custom — and the quick jumps (Today, Yesterday, This/Last week, This/Last month, Last 3 mo, This year).	NOT TICKED
2026-08-31	Accounts System	Report Studio — /reports/month-wise rebuilt	Confirm the trend chart auto-buckets by day/week/month so a year is not 365 points.	NOT TICKED
2026-08-31	Accounts System	Report Studio — /reports/month-wise rebuilt	Check all three business tabs — Apple System (B2B), Aahaas B2C, Aahaas B2B (Flights) — return the same window, and the comparison panel loads after render.	NOT TICKED
2026-08-31	Accounts System	Report Studio — /reports/month-wise rebuilt	Confirm the table opens on exactly the original 14 columns; the extra ~32 are opt-in through the picker.	NOT TICKED

Date	System	Section	Planned task	Recorded state
2026-08-31	Accounts System	Report Studio — /reports/month-wise rebuilt	Verify the Reconciliation group: P&L restated in the invoice currency, variance and variance %. Re-check the VN41523 case (INR 65,008 vs USD 671.30 → 64,834.15, variance 173.85 / 0.27%).	NOT TICKED
2026-08-31	Accounts System	Report Studio — /reports/month-wise rebuilt	Confirm unmatched rows tint amber and cancellations red.	NOT TICKED
2026-08-31	Accounts System	Report Studio — /reports/month-wise rebuilt	Test Excel (summary sheet + per-currency totals + optional extra business sheets), CSV and PDF — each must contain exactly the columns on screen.	NOT TICKED
2026-08-31	Accounts System	Report Studio — /reports/month-wise rebuilt	Confirm currencies are never added together anywhere, and a money column with no row in that currency prints blank, not 0.	NOT TICKED
2026-08-31	Accounts System	Report Studio — /reports/month-wise rebuilt	Re-measure page weight after the markup tightening (month ≈ 761 KB, quarter ≈ 1.9 MB) and confirm no regression.	NOT TICKED
2026-08-31	Accounts System	Report Studio — /reports/month-wise rebuilt	Confirm the removed ReportController::monthWise / exportMonthWise helpers are genuinely unreachable and that index, dateWise and their exports are untouched.	NOT TICKED
2026-08-31	Accounts System	Report Studio — /reports/month-wise rebuilt	Verify the renamed sidebar entry / reports_month grant ("Report Studio") still covers every new sub-route under the reports.month-wise name prefix — no access-config change should be needed.	NOT TICKED
2026-08-31	Accounts System	Report Studio — /reports/month-wise rebuilt	Confirm timezone handling resolves days in Asia/Colombo (config app.report_timezone), not UTC.	NOT TICKED
2026-08-31	Accounts System	Pagination views — app-wide UI change	Confirm the paginator default set in AppServiceProvider applies everywhere and no page still renders Tailwind/Bootstrap-4 default markup.	NOT TICKED
2026-08-31	Accounts System	Pagination views — app-wide UI change	Walk the main paginated pages — invoices, P&L, payables, reports, B2C, B2B — first / middle / last page, and the single-page case.	NOT TICKED
2026-08-31	Accounts System	Pagination views — app-wide UI change	Verify query strings (filters, date ranges, sort) survive page links on each of those pages.	NOT TICKED
2026-08-31	Accounts System	Pagination views — app-wide UI change	Check simplePaginate pages render the simple view correctly.	NOT TICKED
2026-08-31	Accounts System	Pagination views — app-wide UI change	Confirm accessibility bits: disabled prev/next, aria-current on the active page, keyboard focus visible.	NOT TICKED
2026-08-31	Accounts System	Pagination views — app-wide UI change	Check the views on a narrow viewport — pagination must not force horizontal scroll.	NOT TICKED
2026-08-31	Accounts System	Detailed P&L — modal positioning fix	Open the Detailed P&L modal from /pnl/db and confirm it is positioned usably at short and tall viewports, and when the page is scrolled.	NOT TICKED

Date	System	Section	Planned task	Recorded state
2026-08-31	Accounts System	Detailed P&L — modal positioning fix	Confirm stacked dialogs (edit figures, diff popup) still layer correctly and body scroll is restored on close.	NOT TICKED
2026-08-31	Accounts System	Detailed P&L — modal positioning fix	Confirm no behaviour changed beyond position — figures, edit and revert paths untouched.	NOT TICKED
2026-08-31	Accounts System	Safety and release preparation	Re-confirm nothing in today's diff writes to the B2C or B2B connections.	NOT TICKED
2026-08-31	Accounts System	Safety and release preparation	Confirm no migration was added today; if any schema change is needed, php artisan migrate --pretend first and get sign-off.	NOT TICKED
2026-08-31	Accounts System	Safety and release preparation	Review the diff for secrets, tokens, production URLs or customer data (.env.example changes especially).	NOT TICKED
2026-08-31	Accounts System	Safety and release preparation	Check logs for DB connection errors on the new B2B connection and for slow queries on Report Studio's wide windows.	NOT TICKED
2026-08-31	Accounts System	Safety and release preparation	Do not run the PHPUnit suite unless the test connection is confirmed local — it drops tables in tearDown and the TestCase remote-host guard must stay in place.	NOT TICKED
2026-08-31	Accounts System	Known follow-up	InvoiceReportService::download() references an undefined \$onlyBrand (~line 645) on the /reports export path. Harmless today (reads as null, the intended default) but latent — decide whether to fix now.	NOT TICKED
2026-08-31	Accounts System	Known follow-up	Confirm with the user whether the B2B schema name is correct in this environment before anyone reads the figures as authoritative.	NOT TICKED
2026-08-31	Accounts System	Handoff checklist	Record routes tested, sample bookings/invoices checked and the reconciliation figures verified.	NOT TICKED
2026-08-31	Accounts System	Handoff checklist	Note the B2B connection settings needed for deployment and which roles were granted access.	NOT TICKED
2026-08-31	Accounts System	Handoff checklist	List remaining issues with severity, reproduction steps and affected role.	NOT TICKED
2026-08-31	Accounts System	Handoff checklist	Prepare a deployment note covering: new B2B connection env keys, access.php grants, Report Studio route rename, pagination provider registration.	NOT TICKED
2026-08-31	Booking System	Blockers to clear first — high priority	Create the driver-brief table. Not run against live yet:	NOT TICKED
2026-08-31	Booking System	Blockers to clear first — high priority	Set DRIVER_BRIEF_REPORT_TO in .env. Unset = no email is ever sent; the panel still works. Confirm the recipient list with Operations before enabling.	NOT TICKED

Date	System	Section	Planned task	Recorded state
2026-08-31	Booking System	Blockers to clear first — high priority	Confirm every new env var is documented in .env.example and none is committed with a real value.	NOT TICKED
2026-08-31	Booking System	Driver Brief — deck, AI talking points, readiness report	Confirm the Driver Brief button (teal, headphones) shows in the booking action row and is hidden on Hotel Only files.	NOT TICKED
2026-08-31	Booking System	Driver Brief — deck, AI talking points, readiness report	Walk all seven slides in order — Your Driver, The Guests, Flights, Hotels, The Route, Tickets, Sign Off.	NOT TICKED
2026-08-31	Booking System	Driver Brief — deck, AI talking points, readiness report	Test keyboard driving: ← → / space / Home / End, one-handed while on a call. Confirm the chapter rail ticks off what has been read.	NOT TICKED
2026-08-31	Booking System	Driver Brief — deck, AI talking points, readiness report	Verify the driver slide: portrait, name, phone, the dial sentence, Dial / Copy / WhatsApp buttons, licence, vendor, vehicle, seats, dates covered — and that every other driver on the file lists with their own dates, plate and dial button.	NOT TICKED
2026-08-31	Booking System	Driver Brief — deck, AI talking points, readiness report	Confirm children render with the baby icon and important notes show in amber.	NOT TICKED
2026-08-31	Booking System	Driver Brief — deck, AI talking points, readiness report	Check flight sectors label correctly as "you meet this one" / "you drop for this one".	NOT TICKED
2026-08-31	Booking System	Driver Brief — deck, AI talking points, readiness report	Confirm The Route reuses the existing agenda-sourced JourneyMap, so the brief can never disagree with the movement chart.	NOT TICKED
2026-08-31	Booking System	Driver Brief — deck, AI talking points, readiness report	Confirm Tickets group by the day the driver needs them and warn loudly on anything not activated.	NOT TICKED
2026-08-31	Booking System	Driver Brief — deck, AI talking points, readiness report	Verify the two deliberate exclusions on a real booking: no money anywhere (rates, advances, P&L all stripped — a driver can see this screen) and no passport numbers in the model prompt. Inspect the actual payload, not the UI.	NOT TICKED
2026-08-31	Booking System	Driver Brief — deck, AI talking points, readiness report	Confirm the AI "Say this" panel is cached on the record and reopening costs no second OpenAI call.	NOT TICKED
2026-08-31	Booking System	Driver Brief — deck, AI talking points, readiness report	Confirm the deck loads data first and lets the AI catch up — it must be usable with a driver already on the line.	NOT TICKED
2026-08-31	Booking System	Driver Brief — deck, AI talking points, readiness report	Test a booking with no driver, no flights and no tickets — empty states, not crashes.	NOT TICKED
2026-08-31	Booking System	Driver Brief — deck, AI talking points, readiness report	Open /dashboard/srilanka/driver-allocation and check the three-column panel above the filters (D-3 / D-2 / D-1) with its per-column instruction text.	NOT TICKED
2026-08-31	Booking System	Driver Brief — deck, AI talking points, readiness report	Verify the five verdicts grade correctly against real files: no_driver, ready_to_brief, brief_started, briefed, no_driver_needed.	NOT TICKED

Date	System	Section	Planned task	Recorded state
2026-08-31	Booking System	Driver Brief — deck, AI talking points, readiness report	Confirm every row is one click from the deck and the dial button works.	NOT TICKED
2026-08-31	Booking System	Driver Brief — deck, AI talking points, readiness report	Test the per-row Driver Brief button in the table's driver cell (files outside the three-day window).	NOT TICKED
2026-08-31	Booking System	Driver Brief — deck, AI talking points, readiness report	Test "Email now" — with approval, to a test recipient only. Confirm the mail matches the panel.	NOT TICKED
2026-08-31	Booking System	Driver Brief — deck, AI talking points, readiness report	Verify the 07:00 Asia/Colombo scheduler (cron-scheduler.ts) and /api/cron/driver-brief-report (vercel.json, 01:30 UTC) are both registered, and confirm the once-a-day guard inside the run function makes running both together safe.	NOT TICKED
2026-08-31	Booking System	Driver Brief — deck, AI talking points, readiness report	Confirm no email fires from a local or preview run.	NOT TICKED
2026-08-31	Booking System	Aahaas B2B (Flights) — new, read-only	Run the read-only probe to confirm the schema: node scripts/b2b-probe.mjs from apple-holidays/ (SHOW TABLES + COUNT(*)).	NOT TICKED
2026-08-31	Booking System	Aahaas B2B (Flights) — new, read-only	Confirm DB_DATABASE_B2B points at the schema that actually holds the b2b_* tables (defaults to production_live1, falls back to DB_DATABASE_B2C) — this was never confirmed against live.	NOT TICKED
2026-08-31	Booking System	Aahaas B2B (Flights) — new, read-only	Verify the write guard: b2bQuery / b2bBatch run every statement through assertReadOnly, multipleStatements is off, and a trailing ; with anything after it is rejected. Try to smuggle a second statement through a parameter and confirm it throws inside our process.	NOT TICKED
2026-08-31	Booking System	Aahaas B2B (Flights) — new, read-only	Open /dashboard/b2b-flights — only confirmed, deleted_at IS NULL, newest first.	NOT TICKED
2026-08-31	Booking System	Aahaas B2B (Flights) — new, read-only	Test the stat band and every filter: search (reaching into PNR, hotel name, policy number, passenger blob), component, payment status, booked-date range.	NOT TICKED
2026-08-31	Booking System	Aahaas B2B (Flights) — new, read-only	Open the first real booking and confirm the segments and passenger manifest populated — the flight_data / passenger_data mapping came from the Laravel source in Flights_dash, not a live sample.	NOT TICKED
2026-08-31	Booking System	Aahaas B2B (Flights) — new, read-only	Confirm an unrecognised JSON blob degrades gracefully: empty segment list, raw JSON still reachable in the collapsed inspector.	NOT TICKED
2026-08-31	Booking System	Aahaas B2B (Flights) — new, read-only	Test "View invoice" (HTML, prints cleanly), "Invoice PDF" and "Download details" (A4).	NOT TICKED

Date	System	Section	Planned task	Recorded state
2026-08-31	Booking System	Aahaas B2B (Flights) — new, read-only	Confirm mixed component currencies are declared, never silently summed, and the adjustment row appears when the header amount differs.	NOT TICKED
2026-08-31	Booking System	Aahaas B2B (Flights) — new, read-only	Confirm the sidebar entry appears for exactly the roles that already see "B2C — Aahaas", and the route is blocked server-side for the rest.	NOT TICKED
2026-08-31	Booking System	Aahaas B2B (Flights) — new, read-only	Confirm no migration, schema change or seed came with this.	NOT TICKED
2026-08-31	Booking System	30 Sundays file-handler resolution	Run the read-only checks first: node scripts/file-handler-resolve-dry-run.mjs and node scripts/quote-ai-probe.mjs.	NOT TICKED
2026-08-31	Booking System	30 Sundays file-handler resolution	Confirm QUOTE_AI_DB_DATABASE is set and that quote-ai-db.ts is structurally incapable of writing — every statement through assertReadOnly, multipleStatements:false, fresh connection per query.	NOT TICKED
2026-08-31	Booking System	30 Sundays file-handler resolution	Re-verify the match: apple_quote_ai.tbl_corporate_parties (is_number + file_handler) joined to bookings.isNumber. Last dry run: 144 bookings hold 30sundays Aahaas, 19 resolvable now (the quote table has only 45 rows so far).	NOT TICKED
2026-08-31	Booking System	30 Sundays file-handler resolution	Confirm the only write is bookings.fileHandler, through a guarded updateMany requiring the row to still hold the placeholder — a human rename between read and write must stand.	NOT TICKED
2026-08-31	Booking System	30 Sundays file-handler resolution	Confirm a quote row whose own file_handler is empty or is itself the placeholder resolves to nothing — a placeholder must never replace a placeholder.	NOT TICKED
2026-08-31	Booking System	30 Sundays file-handler resolution	Confirm 30 Sundays Agent (208 bookings) is a different handler and is never touched.	NOT TICKED
2026-08-31	Booking System	30 Sundays file-handler resolution	Test the "Find real handler" chip on a booking page — it must appear only when the value is the placeholder — and confirm the ActivityLog entry records from → to.	NOT TICKED
2026-08-31	Booking System	30 Sundays file-handler resolution	Test "Replace all" in admin config (admin-only): pending count, full sweep, and the list of every ref changed.	NOT TICKED
2026-08-31	Booking System	30 Sundays file-handler resolution	Verify the 5-minute sweep over bookings created ≥ 10 min ago (72 h rolling window) picks up a booking created while the process was down, and that /api/cron/file-handler-resolve is registered in vercel.json for the serverless runtime.	NOT TICKED
2026-08-31	Booking System	30 Sundays file-handler resolution	Flag to the quote side: VN41509's quote row says the handler is literally testing. The sweep copies what the quote table holds — clean it up upstream before the sweep writes it.	NOT TICKED

Date	System	Section	Planned task	Recorded state
2026-08-31	Booking System	Basemaps — keyless OSM tiles	Confirm tiles load on both the booking JourneyMap and the dashboard live-ops map with no API key present.	NOT TICKED
2026-08-31	Booking System	Basemaps — keyless OSM tiles	Verify OSM attribution renders correctly and is not clipped, in both light and dark map themes.	NOT TICKED
2026-08-31	Booking System	Basemaps — keyless OSM tiles	Confirm no map key remains in the client bundle or .env.example.	NOT TICKED
2026-08-31	Booking System	Basemaps — keyless OSM tiles	Sanity-check tile load under the Driver Brief's dark-theme route slide.	NOT TICKED
2026-08-31	Booking System	Safe test and release preparation	No WhatsApp or customer/driver message from testing without approval; test numbers only.	NOT TICKED
2026-08-31	Booking System	Safe test and release preparation	No Prisma migration, db execute or SQL script against live without explicit sign-off (see section 0).	NOT TICKED
2026-08-31	Booking System	Safe test and release preparation	Run the build and clear type/lint errors across the new pages and libraries.	NOT TICKED
2026-08-31	Booking System	Safe test and release preparation	Review the diff for secrets, tokens, production URLs, customer data and passport numbers.	NOT TICKED
2026-08-31	Booking System	Safe test and release preparation	Check logs for OpenAI errors on the brief path, DB connection failures on the two new read-only clients, and cron behaviour on the serverless runtime (no long-lived connections).	NOT TICKED
2026-08-31	Booking System	Handoff checklist	Record routes tested, bookings used, dry-run output and results.	NOT TICKED
2026-08-31	Booking System	Handoff checklist	Note the two blockers (driver-brief table, DRIVER_BRIEF_REPORT_TO) and their state.	NOT TICKED
2026-08-31	Booking System	Handoff checklist	Note the unconfirmed DB_DATABASE_B2B schema and who is confirming it.	NOT TICKED
2026-08-31	Booking System	Handoff checklist	List remaining issues with severity, reproduction steps and affected role.	NOT TICKED
2026-08-31	Booking System	Handoff checklist	Prepare a deployment note covering: driver-brief SQL + env vars + two cron registrations, B2B env keys and sidebar roles, quote-AI env key and the 5-minute sweep, basemap change.	NOT TICKED

6. Method and limitations

Scope

Every dated work record held locally in *Booking_System/DailyUpdated* for 12 Aug – 10 Sep 2026: 18 daily update logs and 6 planned task checklists.

How status was decided

Taken directly from the logs, never inferred. An item is **Done** when the log carries a written delivery entry for it, and **Not done** when the log itself files it under Follow-Up Items, Open Items or Outstanding.

Carried-forward items

Items shown as (*carried forward*) are end-of-day follow-ups not attached to a single project.

Email requests

Not covered — Gmail read access is not granted to the connected account. No emailed request from pradeep.kumar@bcdtravel.lk has been read, reconstructed or inferred anywhere in this report.

To complete the comparison

Authorise the Gmail connector with read permission in claude.ai connector settings. The report can then be reissued with a 'Requested' column set against each delivered item.

Live data

Produced by reading local markdown files only. No project code, database or live system was opened, run or modified.
